### SAFETY & EMC

### DESCRIPTION

The chassis mountable RMD150-UW series DC/DC converter is designed for railway and transportation applications and is compliant with all relevant standards: EN50155, EN50121-3-2, DB-EMV06, EN50124-1, EN50125-1, EN61373 1B, EN62368-1, EN45545-2. The unit is designed with 11:1 input voltage range to cover the input voltages from 14.4VDC up to 154VDC for nominal 24, 36, 48, 72 and 110V in one range for all applications - on every vehicle worldwide. The isolated and regulated 24V output works with a reinforced isolation system. Due to the base plate mounting the unit operates with full power within the wide temperature for OT4+ST1&ST2 class from -40°C to +85°C and no additional cooling systems are necessary. Input reverse polarity protection, inrush current limitation, 10ms hold-up time, remote control, and output OR-ing diode and efficiency of up to 94% round up the functionality of this fully railway compliant Plug&Play unit.

### PEAK LOAD CAPABILITY

Peak power capability supports short power peaks of dynamic loads like motors, relays, storage devices or computer booting sequences. In addition allowing faster charge of load sided capacitors and reliable circuit breaker operation.

- $P_{nom}$  = nominal output power [W]
- $P_p$  = peak output power (165W max) [W]
- $P_r$  = recovery power [W]
- $t_1$  = peak time (10s max) [s]
- $t_2$  = recovery time (calculated) [s]

Calculation:

$$t_2 = \frac{(P_{nom} - P_p) \times t_1}{P_r - P_{nom}}$$

**Practical Example:**

- $P_{nom} = 150W$
- $P_p = 165W$
- $P_r = 145W$
- $t_1 = 10s$

$$t_2 = \frac{(150W - 165W) \times 10s}{145W - 150W} = \underline{30s}$$

### OUTPUT VOLTAGE TRIMMING

The output voltage of the RMD150-UW can be trimmed between +5% and -20% by using an external trim resistor. The values for the trim resistor are according to standard E96 values; therefore, the specified voltage may slightly vary. Resistor values may be calculated with the following equation:

Calculations:

- $V_{out_{nom}}$  = nominal output voltage [VDC]
- $V_{out_{set}}$  = trimmed output voltage [VDC]
- $R_{up}$  = trim up resistor [ $\Omega$ ]
- $R_{down}$  = trim down resistor [ $\Omega$ ]

$$R_{up} \cong \frac{322k\Omega \times V_{OUTnom} - 306k\Omega \times V_{OUTset}}{V_{OUTset} - V_{OUTnom}}$$

$$R_{down} \cong \frac{20k\Omega \times V_{OUTset} - 16k\Omega \times V_{OUTnom}}{V_{OUTnom} - V_{OUTset}}$$

## 150W / Ultra-Wide Input 24V-110VDC

### OUTPUT VOLTAGE TRIMMING

**Practical Example trim up +5% for RMD150-110-24SUW**

$$R_{up} = \left[ \frac{322k\Omega \times 24V - 306k\Omega \times 25.2V}{25.2V - 24V} \right] = 14000\Omega$$

$R_{up}$  according to E96  $\approx$  **14k $\Omega$**

**Practical Example trim down -10% for RMD150-110-24SUW**

$$R_{down} = \left[ \frac{20k\Omega \times 21.6V - 16k\Omega \times 24V}{24V - 21.6V} \right] = 20000\Omega$$

$R_{down}$  according to E96  $\approx$  **20k $\Omega$**

### INSTALLATION & APPLICATION

#### Mounting Instructions

For operation of the DC/DC converter the PE connection at the intended connection point as part of the overall EMC concept is mandatory.

Natural air convection around the unit must be possible at any time and the temperature shall not be exceeded.

The RMD converter has to be installed with 4 x M4 screws and can be mounted in any mounting direction.

All control and signal terminals have been tested and have passed the requirements according to the EN50121-3-2 regulations, nevertheless for installation conditions with cable lengths above 30m, maybe additional protection against disturbances will be necessary.

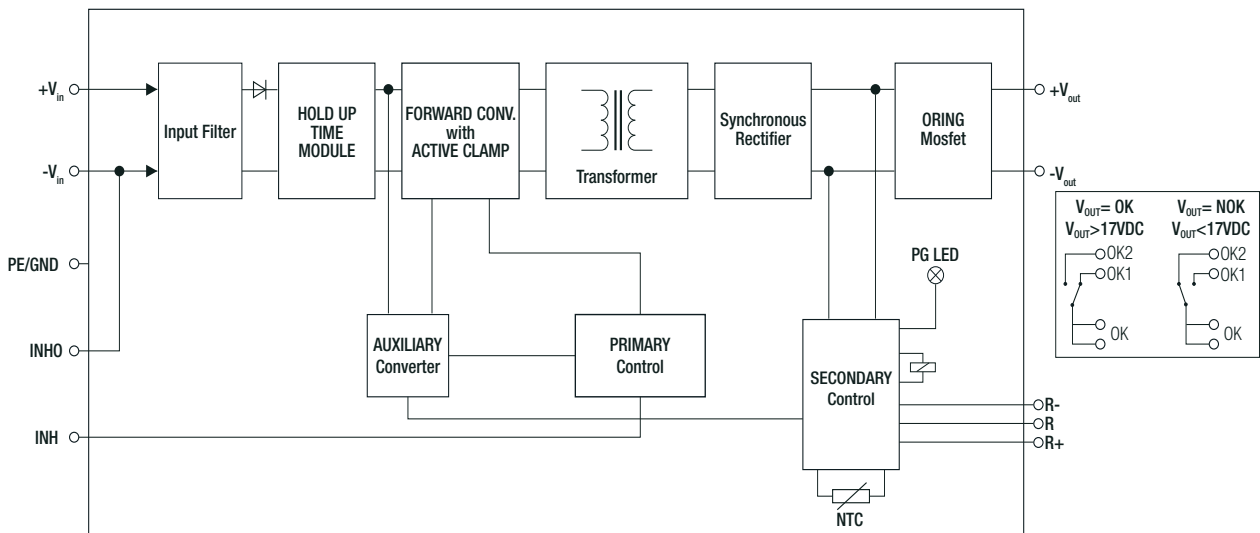

### INSTALLATION & APPLICATION

#### Parallel Operation

Here the example of three parallel connected units.
