CLM3820 60A F Series Device (Draft)

CLM3820 60A F Series Device

Description

Current Limiting Module (CLM) is a chip type surface mountable device that can protect against both overcurrent and overcharging. It comprises a fuse element to ensure stable operation under normal electrical current and to cut off the current when overcurrent occurs. It also comprises a resistive heating element that could be used in combination with a voltage detecting means, such as IC and FET. When overvoltage is detected, the heating element is electrically excited to generate heat to blow the fuse element to achieve overvoltage protection.

Features

- Halogen-free
- Surface mountable
- Overcharging protection
- Fast response time
- Overcurrent protection

Application

- Self Balancing
- Automotive applications
- E-Bike
- Energy Storage systems
- Power Tool
- Drone

Electrical Characteristics

Current Capacity	100% x I_{rated} No Melting
Cut Time	200% x I_{rated} < 1 min
Over Voltage Operation	In operation voltage range, the fusing time is <1min.

Note on Electrical Specifications & Characteristics

■ Vocabulary

- I_{rated} = Current carrying capacity that is measured at 40°C thermal equilibrium condition.
- I_{break} = The current that the fuse element is able to interrupt.
- V_{max} = The maximum voltage that can be cut off by fuse.
- V_{op} = Range of operation voltage.
- R_{heater} = The resistance of the heating element.
- R_{fuse} = The resistance of the fuse element.

Cells in series = Number of battery cells connected in series in the circuit for CLM device to protect.

- Value specified is determined by using the PWB with 25mm*3oz copper traces, AWG6 covered wire, and 0.6mm glass epoxy PCB.
- Specifications are subject to change without notice.

⚠ WARNING

■ General

- Before and after mounted, the ultrasonic-cleaning or immersion-cleaning must not be done to CLM device. The flux on element would flow, and it would not be satisfied its specification when cleaning is done. In addition, a similar influence happens when the product comes in contact with cleaning-solution. These products after cleaning will not be guaranteed.
- Silicone-based oils, oils, solvents, gels, electrolytes, fuels, acids, and the like will adversely affect the properties of CLM devices, and shall not be used or applied.
- Please Do Not reuse the CLM device removed by the soldering process.
- CLM devices are secondary protection devices and are used solely for sporadic, accidental over-current or over-temperature error condition, and shall NOT be used if or when constant or repeated fault conditions (such fault conditions may be caused by, among others, incorrect pin-connection of a connector) or over-extensive trip events may occur.
- Operation over the maximum rating or other forms of improper use may cause failure, arcing, flame and/or other damage to the CLM devices.
- The performance of CLM devices will be adversely affected if they are improperly used under electronic, thermal and/or mechanical procedures and/or conditions non-conformant to those recommended by manufacturer.
- Customers shall be responsible for determining whether it is necessary to have back-up, failsafe and/or fool-proof protection to avoid or minimize damage that may result from extra-ordinary, irregular function or failure of CLM devices.
- There should be minimum of 0.1mm spacing between CLM and surrounding compounds, to maintain the product characteristics and avoid damage other surrounding compounds.
- This product is designed and manufactured only for general-use of electronics devices. We do not recommend that it is used for the applications Military, Medical and so on which may cause direct damages on life, bodies or properties.
- Please prevent to contact resin-mold with CLM devices, which might be infiltrated by resin material and lead to the specification incompatible. It will not be guaranteed after resin-mold has been done to product.
